

Environmental Commitment

Trelleborg Sealing Solutions Kalmar AB is the world leader in production and development of brake noise and vibration damping solutions for automotive and industrial applications. The company is utilizing the Environmental Management System ISO.

Our ambition is to reduce environmental impact of our business activities. The main environmental impact of our products is through the production and transportation of raw materials and products. Good supplier cooperation is of the utmost importance to reduce the environmental impact. We therefore prefer that our suppliers have a certified EMS according to ISO 14001.

During the phase of new product development the used chemicals are checked according to various Restricted Substance Lists. A general list which is applicable is the GADSL (Global Automotive Declarable Substance List) which can be accessed at www.gadsl.org/.

Our continuous environmental work is a contributing factor for the reduction of green house gas CO₂, during the manufacturing process. The result is a more environmental friendly product to our customers.

Rubore®
www.trelleborg.com/rubore

We focus on preventive actions and continuous improvement in our environmental work, for example;

- Reuse of heat from the manufacturing process
- Only use of renewable electricity and district heating
- Energy team with purpose to decrease the energy consumption
- Safe storage, handling, and waste handling of chemicals
- The waste is recycled as energy or material
- The vulcanization process is free from solvents

Climate impact

*Limited to the production.
